

Hospital Management Information System

Be Smart Go Digital

Right use of technology helps a practice to improve patient outcomes, increase patient trust and grow the bottom line.

Maintaining paper records is a thing of the past. A modern practice must be digitized (computerized) to provide best-in-class service and health outcomes to patients. A connected computer system in hospital helps in accurate diagnosis as well as reduces chances of human errors due to miscommunication. Maintaining computerized patient records, billing, inventory and accounts make the practice efficient and cost effective. A digitized practice has an added advantage of easy compliance of healthcare regulations.

HMIS Features

Sehat Central HMIS covers all aspects of end-to-end functioning of hospitals, polyclinics and solo practices.

- ✓ **OPD & IPD Patient Administration**

 - Registration
